Udogri Oruaro

Frontend Engineer
oudogri@gmail.com | github.com/udogri | Portfolio | linkedin

Professional Summary

Frontend software engineer with 3+ years of hands-on experience building responsive, user-focused web applications. Strong in modern JavaScript frameworks, API integration, and UI systems, with a focus on clean architecture and scalable component design. Passionate about improving user experience and rapidly shipping production-ready features.

Technical Skills

Languages & Core Technologies: JavaScript (ES6+), TypeScript, HTML5, CSS3, JSON, XML
Frontend Frameworks & Libraries: React.js, Next.js, Redux, Context API, React Router, React Hooks
UI/UX & Styling: Tailwind CSS, Chakra UI, Styled Components, CSS Modules, Responsive Design
API Integration: RESTful APIs, API Integration, Axios, Fetch API
Development Tools & Workflow: Git, GitHub, npm/yarn, Webpack, Vite, ESLint, Chrome DevTools
Modern Development Practices: Component-Based Architecture, State Management, Performance Optimization
Deployment & Hosting: Vercel, Netlify, GitHub Pages, Static Site Generation

Professional Experience

Frontend Engineer Feb 2026 – Present

Tapp App (Contract)

- Contributed to the development of a fintech platform that enables multi-currency wallets, fund transfers, account top-ups, and real-time transaction management, contributing core features from design discussions through implementation.
- Implemented wallet management and currency conversion workflows, creating intuitive user experiences for handling cross-currency financial operations.
- Integrated Stripe payment infrastructure to support secure funding and payment processing workflows within the application ecosystem.
- Collaborated closely with backend engineers to integrate RESTful APIs, AWS services (API Gateway, Lambda, and Cognito), and WebSocket-based real-time updates for balances, transactions, and account activities.
- Implemented secure authentication and user management flows using AWS Cognito, ensuring scalable and maintainable access control across the platform.
- Refactored frontend components into reusable modules, reducing code duplication and improving maintainability, scalability, and developer productivity.

Frontend Engineer Feb 2023 – Dec 2025

Sadel Technologies

- Contributed to the development and maintainance of responsive frontend interfaces for web-based management systems, including Hospital Management Systems(HMS), with a focus on usability, accessibility, and performance.
- Built modular, data-driven UI components for core HMS functionalities such as patient records, appointment scheduling, and administrative dashboards.
- Integrated frontend applications with RESTful APIs to enable secure, real-time data exchange for critical healthcare workflows and system operations.
- Refactored and optimized existing components to improve maintainability, reduce technical debt, and enhance overall application performance across management platforms.
- Ensured cross-device compatibility and implemented responsive design principles to support seamless usage across desktops, tablets, and mobile devices.

Frontend Engineer Feb 2025 – Jan 2026

OneByOne (Contract)

- Contributed to the development and maintainance of **10+ responsive interfaces** for a nationwide scholarship funding platform using **React.js** and **Chakra UI**, improving accessibility and UI consistency.
- Architected a **multi-role Sponsorship Admin Dashboard** handling **4 distinct user types (Sponsor, School, Scholarship, Super Admin)** and integrated **50+ API endpoints** for data synchronization.
- Reduced page load time through component reuse, code splitting, and lazy loading strategies.

- Built **School Admin and Fund Admin UIs** that streamlined fund request and approval workflows, reducing manual review step.
- Implemented modern React best practices — **custom hooks, reusable components, context-based state management** — resulting in cleaner and more maintainable codebase.

Education

Bachelor of Engineering in Civil Engineering 2017 – 2022
Landmark University
